

INSTALLATION INSTRUCTIONS

LA84P - LARGE CAPACITY CLOTHES DRYER

EASY TO INSTALL/EASY TO USE

USING DRYER:

BEFORE OPENING DRYER, BE CERTAIN ALL LINES ARE HANGING FREELY.

- **TO OPEN:** Loosen bottom adjusting knob and spread arms out slightly. Grasp opposite arms and gently push upwards like an umbrella until the lines are tight. Tighten bottom adjusting knob.
 - **TO CLOSE:** Loosen bottom adjusting knob. Grasp opposite umbrella arms and pull down.
- WARNING: DAMAGE CAN OCCUR IF NOT USED AS NOTED.**

GROUND SOCKET INSTALLATION

THE DRYER WILL BE MORE STABLE IF THE GROUND SOCKET IS SET IN CONCRETE. WE RECOMMEND USING STANDARD CONCRETE MIX.

1. Select a suitable site ensuring sufficient space for the dryer to rotate when the arms are fully extended.
2. Dig a hole approximately 10" deep x 10" in diameter.
3. Fill bottom of hole with small stones approximately 5" deep (for tube drainage).
4. Place the ground socket in position leaving the top of the socket flush with the surface.
5. Fill remaining space in the hole with cement mix following instructions on the package. Be sure to keep the ground socket cover closed so no mix gets into the tube.
6. To insure ground socket is standing straight, temporarily place the dryer into the ground socket while the mixture is still soft. Adjust the socket, remove the dryer and let the concrete mix harden..

TO ADJUST HEIGHT:

- Loosen both the top and bottom adjusting knobs.
- Raise or lower dryer arms to desired height and tighten both adjusting knobs.

TO ADJUST LINE TENSION:

- Loosen bottom adjusting knob and push up until lines are tight.
- After a time, you may wish to increase the tension of the individual lines. Loosen the bottom adjusting knob and lower arms slightly. Untie, adjust and re-tie each line.

TO REPLACE CLOTHESLINES

We recommend using Lehigh's 5/16" plastic clothesline (items 922 or 923)

1. With dryer partially open, remove loose line.
 2. With dryer fully open, string line through all four arms, pull tight and tie the line.
